The following abstract submission is a part of symposium to be organized by Dr. Shinichi Fukuzumi. This symposium (symposium about certification professional ergonomists in IEA2015) is focused on professional ergonomist certification, which is proposed to promote the application of ergonomics in various fields.

Certification has been proved to be a good practice in promoting applications in industry by many disciplines. The Chinese Ergonomics Society (CES) has been working closely with the Ergonomics Society of Taiwan (EST) and the Hong Kong Ergonomics Society (HKES) to launch Certification of Professional Ergonomics in the great China region. The procedures and detailed requirement has been made in the past 2 years through many times of discussion. It is nice to know that several IEA federated societies also have similar ideas and quite a few of the societies have already prepared policies for the CPE program and some even have already launched. During the AHFE2014 conference held in Poland in July, some representatives of the IEA federated societies have got together to discuss about the CPE program. They have come to a conclusion that it would be good to have a more in-depth and in-coverage discussion during the IEA congress. In this context, the CES would be very interested to attend this discussion in order for us to learn the thinks and experiences of other societies and introduce our ideas.
